Quentin Rebergue - Embedded Systems Engineer

Profile

Looking for a full-time position in software engineering with a focus on embedded Linux, hardware interfacing, firmware development. MSc in Computer Engineering (EPITA - GISTRE) in Systems / Embedded. Fluent in French and English (TOEIC 915, C1). Interests: watchmaking, music, hiking/running, cooking.

Work Experience

- **Software Engineer - Platform team, ARISTA**, Dublin — 02/2026 – Now

  Implemented non-zero reset value management for ASIC Physical Table registers across the chip-agnostic Strata infrastructure (SDK parsing, code generation, DMA) in python and C++. Won 1st place at Arista's Hackathon by building an AI agent optimization tool (70% token reduction on internal codebases). Approved for production development.

- **Head of Teaching Assistants - YAKA** / **ACU Program, EPITA**, Kremlin-Bicetre — 09/2024 – 02/2026

  Led the national team of 67 TAs and supervised 5 intensive coding bootcamps (Java, C++, JS, C/Bash, SQL) and 7 large-scale projects (compiler, HTTP server in C, malloc, POSIX shell) for 700+ 3rd-year students across 5 campuses. Implemented 1-on-1 code review mentorship model, improving TA-to-student ratio from 1:30 to 1:20.

- **Freelance Software Engineer, Various Clients**, Paris — 09/2021 – 03/2024

  Built and managed full-stack information systems for 10+ clients. Led B2B survey platform (200k euros, 2 devs) as first technical lead. Architected PIM + CRM + ERP ecosystem. Owned end-to-end IS at Aussitôt Bon.

School Projects

- **RFID Driver** – Developed a Linux kernel character device driver for the MFRC522 RFID reader with file_operations callbacks, SPI regmap communication, and a FIFO command interface. Tested via QEMU emulation.
- **ARM project** – Built an STM32F429ZI embedded system acting as a UART command server using libgapcom (Protobuf over UART). Implemented a 4-level log subsystem and an MPU6050 gyroscope driver over I2C with FIFO reads.Team of 2.
- **My Docker** – Built a lightweight container runtime in C, using Linux namespaces, pivot_root, capabilities dropping, seccomp syscall filtering, and cgroups. Pulls and mounts a root filesystem from a container registry.
- **Synchronous Real-Time Systems** – Built a Rate Monotonic scheduler in Heptagon, a dataflow language that compiles nodes to deterministic C step functions with no heap allocation, and deployed it to Raspberry Pi 3 via UART bootloader.

Education

- **MSc Computer Engineering, Low-level & Systems (GISTRE)**, EPITA — 2020 – 2026
- **Preparatory Class (PTSI) in Engineering Science**, Lycée Jules Ferry Versailles — 2019 – 2020

Technical Expertise

- **Programming & Languages:** ADA, ASM, Bash, C, C++, Python, Rust, VHDL.
- **Embedded & Hardware:** ASIC interfacing, FPGA, I2C, RTL, SPI, STM32, UART.
- **Other** / **DevOps:** GDB, strace, valgrind, security, system analysis, testing.
- **Systems:** DMA, Linux, OS, drivers, kernel, memory architecture, multithreading, real-time, virtualization.
